

KDL/E cable entry system

2005

KDL/E cable entry system

Advantages

Safe and easy cable entry

The KDL/E cable entry system substantially reduces assembly times for pre-assembled cables with diameters between 0.11" and 1.22".

The cable entry system can be configured with up to 20 cables.

Cables with plugs no longer need to be dismantled. They can be routed into the housing directly and without interruption.

Standardised cut-outs can be used (e.g. Harting, Wieland, Rittal).

A clever latching system makes assembly, disassembly and subsequent configuration of the cable entry system intuitively easy.

Grommets can be obtained in different sizes, for several cables, for cable protection conduits and for ASI cables.

Advantages:

- Easy entry of pre-assembled cable connectors
- Huge time savings thanks to interruption-free cable guidance
- Rapid assembly
- Simple strain relief
- High degree of protection (IP 54)
- High packing density

KDL/E cable entry system

Advantages

Interruption-free cable infeed

Cables for data, control, bus and test signals as well as pre-assembled cables can be routed into the housing free of interruptions. Introduction of control and conduit cables with attached connectors providing for quick disconnection (system integrity remains valid).

Fast and easy assembly

The split grommet is positioned about the cable and simply inserted into the KDL/E frame. KDL/Es are configured entirely without tools.

Strain relief

For additional strain relief, cables can be secured with cable ties thanks to fixing lugs moulded to grommets.

Click and bolt system

There are two fastening versions for the KDL/E system. With the click system, the KDL/E is simply latched to the standard cut-out by two snap hooks. The snap hooks can be used for plate thickness of 0.06 - 0.08". Alternatively, the KDL/E can be fastened with four bolts in cases of extremely high mechanical stress.

Vario grommet

The Vario grommet has a flexible membrane. This membrane allows different cable diameters to be routed through a Vario grommet. Only 2 versions of the Vario grommet are required to route cables with a diameter ranging from 0.11" to 0.39".

Adapted to standard cut-outs

The fixing dimensions have been adapted to suit standard connector cut-outs for sizes 16 and 24 (e.g. Wieland, Harting and Rittal).

High packing density

The KDL/E system can route up to 20 cables into a control cabinet for a standard connector cut-out for size 24 connectors. An optimal use of space, indeed.

KDL/E cable entry system

Cable entry system, type KDL/E 16

KDL/E 16/x

KDL/AB 16/x-EMV

The KDL/E represents the ongoing further advancement of third generation Murrplastik cable entry systems.

- Even faster assembly of pre-assembled cables.
- Further reduced installation time of the entire KDL/E on standard cut-outs for 16-pin connectors (e.g. Harting, Wieland and Rittal) by way of catch hooks.
- Screwing on is no longer absolutely necessary.
- Variable grommets with a larger clamping range (Vario grommets) translate into fewer grommet sizes required.

The KDL/AB discharge plate, in conjunction with the KDL/E, is suited for discharging interference which may occur on cable sheaths. The discharge plate is mounted on the inside of the control cabinet.

KDL/E cable entry system

Cable entry grommets, type KDT/xE

Standard grommets

Special grommets

In conjunction with the KDL/E cable entry system, the KDT/xE cable entry grommet can be used to easily route pre-assembled cables e.g. in control cabinets. The grommet is 2-pce. and is positioned about the cable. The grommets are equipped with catch hooks which anchor themselves in the KDL/E when positioning.

Strain relief for type KDT/ZE is achieved using a simple cable tie. Type KDT/VE is a Vario grommet without strain relief which covers a larger clamping range.

Type	Order no.	Color	For Ø inch	For entry small / large	Pack

KDL/E cable entry system

Blanking plate, type BP/x

BP/N

The BP/N blanking plate is used for sealing prepared but unused standard cut-outs for 24-pin connectors (e.g. Harting, Wieland and Rittal).
For clip action fastening or screwing in place.
IP 65 protection rating as per DIN 60529.

BP/H

The BP/H blanking plate also is used for sealing prepared but unused standard cut-outs for 24-pin connectors (e.g. Harting, Wieland and Rittal). Assembly is via clip action.
IP 42 protection rating as per DIN 60529.

KDL/E cable entry system

Snap-on mount assembly instructions (for plate thickness 0.06 - 0.08")

Pierce two square membranes with a screwdriver.

Connect the snap hooks included in the scope of delivery to the plate.

Connect fully configured frame to the snap hooks. Ideally, open frame side in the direction of the cables to be routed.

Pry up the snap hooks with a screwdriver until an audible "click" can be heard. Quickly press on grommets.

Screw fastening assembly instructions (for plate thickness < 1.5 mm/> 2.0 mm)

Pierce four round membranes with a screwdriver.

Secure fully configured frame with 4 screws (M5).

Press on grommets at the marked position. Ideally, open frame side in the direction of the cables to be routed.

KDL/E cable entry system

Grommet assembly

Route cable, close grommet and attach a cable tie around the strain relief lug if necessary.

When connecting the grommets, ensure that the sealing lip is at the correct position.

A fully configured KDL/E must have a continuous seal.

Disassembly of frame/grommets

Remove screws and detach KDL/E. Remove grommets only after detaching the KDL/E.

Press catch hooks outward by hand and detach KDL/E. Remove grommets only after detaching the KDL/E.

Loosen grommets out of their anchoring on both sides with a screwdriver. Remove grommets from the unit by hand.
